There are draft IRIS reviews for tetra, penta, hexa, and decabromodiphenyl ethers. I'm almost sure they'll be finalized in my lifetime, but in the meantime I think that's all we've got.

Elizabeth -

Yes, there is quite a bit of information in here. I'm going to need some time to digest all of this, but it looks like a typical metabolic half-life is 6 years, similar to PCBs and dioxins. What RfD should we use for PBDEs?

- Mike
